## Load diagrams

## Technical data

### Test for safety working loads installed in the horizontal way

Values obtained in accordance with IEC 61537, edition 3, according to the horizontal tests of multiple spans listed in point 10.3.4 of this standard, with a safety factor of 170% and without collapse in any case.

The safety working loads test on the 750 and 900 mm wide cable trays were carried out in accordance with the test method set out in section 10.4, and also included a safety factor of 170%.

| Horizontal SWL test                                                                                                                             | Spans 0.5, 1, 1.5, 2 and 2.5 meters |

## Technical data

### Test for safety working loads installed in the horizontal way

Values obtained in accordance with IEC 61537, edition 3, according to the horizontal tests of multiple spans listed in point 10.3.4 of this standard, with a safety factor of 170% and without collapse in any case.

### Safe working load test conditions for cable trays EN61537

|                              |                                                                                                       |
|------------------------------|-------------------------------------------------------------------------------------------------------|
| Support Span                 | 0.5 m - 1 m - 1.5 m - 2 m - 2.5 (depending on cable tray height)                                      |
| Longitudinal deflection      | Less than 1% support span                                                                             |
| Transverse deflection        | Less than 5% of the cable tray width                                                                  |
| Placement of joints          | $(L/4) > u > (L/5)$  |
| Increased safety coefficient | 1.7 times the declared safe working load                                                              |

The safety working loads test on the 750 and 900 mm wide cable trays were carried out in accordance with the test method set out in section 10.4, and also included a safety factor of 170%.

### Maximum Fill Capacity

The load values shown in the load diagrams and tables above are tested and designed to allow operation at the maximum capacity based on the usable tray cross-section shown in the table below:

|         | 50              | 75   | 100  | 150  | 225   | 300   | 450   | 600   | 750   | 900   |
|---------|-----------------|------|------|------|-------|-------|-------|-------|-------|-------|
|         | mm <sup>2</sup> |      |      |      |       |       |       |       |       |       |
| 12...18 | 542             | 822  | 1102 | 1662 | 2502  | 5000  |       |       |       |       |
| 25      | 1171            | 1776 | 2381 | 3591 | 5406  | 7083  | 10653 | 14223 | 17158 | 20608 |
| 50      | 2381            | 3611 | 4841 | 7301 | 10863 | 14523 | 21843 | 29163 | 35808 | 43008 |

### Cable tray configurator and selector

For more precise and specific configurations involving electrical cables, and taking into account the maximum working capacity and the usable cross-sectional area of the trays, Pemsa offers Pemsa Pro, a product configurator that selects the most suitable tray for the user-defined cable configuration. For access and more information, scan this QR code.
